Frozen before the first-contact evaluation (designed on 18 of the 34 confirmation datasets in (D); first contact: (A) 11 new binary datasets, (B) fresh synthetic tasks, (C) 12 clinical tasks, and the 5 new multiclass datasets in (D)): model types and hyperparameters, candidate space $\mathcal{C}$ ($|\mathcal{C}| = 173$, binary default), gate parameters $F = 3$, $N_{\text{boot}} = 20{,}000$, $q = 5\%$, $\varepsilon = 0.005$. Same settings for every task.
